

## WHAT IS LIPO LIGHT?

Lipo Light is a natural and healthy way to lose inches off the waist, hips, thighs, upper legs, and even the arms. Based on LED Light Therapy, Lipo Light offers an advanced technological, non-invasive method to contour your body and reduce unsightly fat.

The heat and unique wavelength of Lipo Light's LED light penetrates the skin and is absorbed by fat cells. This stimulation opens the cells walls, breaks down the contents, and allows the fat to escape. Fat content flows out of the fat cell into your blood and lymph system where it will be "burned off" during a period of post-treatment exercise.

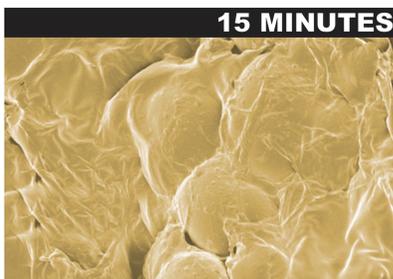

## HOW THE LIPO LIGHT WORKS

**Actual photos of fat emulsification taken under an electron microscope**

**0 MINUTES**

**Filled Fat Cells**

**15 MINUTES**

**Emulsified Fatty Debris Outside Cells**

**20 MINUTES**

**Empty & Collapsed Cells**

## EXPECTED RESULTS

Based on 12 sessions, clients normally lose 1-2 dress sizes, or equivalent, over 3500 calories of fat. Since the device is designed for body contouring and fat loss, success is measured in inches rather than pounds lost on the scale. Lipo Light assists in sculpting the body by making the skin firm, and the process aids in renewed collagen to the treated area.

## BENEFITS OF LIPO LIGHT

The best part about Lipo Light is that there is no bruising, swelling, burning, pain or anesthesia—essentially NO SIDE EFFECTS. NO PAIN and NO RECOVERY TIME. In fact, many patients describe it "as pleasurable as a hot stone massage."

♥ Non-Invasive    ♥ Safe    ♥ No Surgery    ♥ Painless

## FREQUENTLY ASKED QUESTIONS

### How Long Is Each Lipo Light Treatment?

Lipo Light treatment takes just 30 minutes followed by 10 minutes on our vibration platform, or clients can choose to exercise on a treadmill, stationary bike, or elliptical machine.

### Why Work Out After Lipo Light Treatments?

Once the fat cells are broken down after Lipo Light treatments, the contents of the fat cells need a way to exit the body. If they do not exit the body within a few hours, they get reabsorbed by other fat cells. A 10-minute workout immediately after a Lipo Light treatment ensures that the fat is excreted via the lymphatic system. Most clients use our vibration platform, an ideal device for lymphatic stimulation.

### When Will I See My Lipo Light Results?

Often Lipo Light results can be seen after only one session and improve with every treatment thereafter. However, everyone is different. Over the course of twelve Lipo Light sessions, you can achieve dramatic reshaping of the body and reduction in cellulite.

### How Many Treatments Will I Need?

Lipo Light treatments are structured into courses of 12-24 sessions depending on goals, and clinical data reports are based on 12 sessions to lose over 3500 calories of fat. We suggest two to three treatments per week over 4-6 weeks to complete a full course of Lipo Light treatments. You can safely add additional treatments to achieve greater results.

### How Often Do I Need to Do Treatments?

The normal regimen is two to three treatments per week for 4 weeks. Clients can do one treatment per week, but this extends the treatment time by several weeks. We allow 48 hours between Lipo Light treatments to allow the blood fatty acid levels to stabilize after each treatment.

### Is Lipo Light Treatment Comfortable?

Most people feel very little during their Lipo Light treatment and find it comfortable and relaxing. The

typical sensation felt is slight warmth where the treatment pads are in contact with your skin.

### Is Lipo Light Safe?

Yes. Independent clinical studies have shown Lipo Light to be completely safe with no side effects. The Lipo Light simply triggers a natural reaction of fat cell release. The process does not cause any damage and cells remain intact, just smaller, giving immediate results.

## TESTIMONALS

Christine D.

"The decision to go for Lipo Light was one of the most wise choices in my life! I had a relaxing string of treatments, in which all I had to do is lean back and feel the pads melting the fat. After the first six sessions, I had already lost around 2 inches, and the stubborn flab seems to be gone forever! Thank you, Lipo Light! If you are in the hunt for an effective and safe alternative to liposuction, Lipo Light is undoubtedly recommended."

Megan C.

"I've been always a fan of fitness, trying to be an active person and never have to encounter fat and flab issues. Unfortunately, there was one area of my body that, by nature, couldn't respond: my thighs. So, after having unsuccessfully tried to cut back on their size and their bulky shape, I took refuge in Lipo-Light. Today, four months after the treatments, my thighs have each lost approximately 2.5 inches, which is more than I had ever imagined, while the cellulite issue has been also greatly minimized!"

Lisa A.

"A year ago, I lost 17 pounds on the scale through strict diet and exercise, but only lost two inches around my waist. I was frustrated because no one noticed my progress. But on the Lipo Light program, I lost over 8 inches around my torso in 36 days. I went on vacation and loved feeling comfortable in my clothes. It really works!"
